Critical · Bug P1 · problem 1 of 3

Fix Send money checkout for individual traders

61% of their sessions end at Checkout and PIN, vs 9% for everyone else

Full diagnosis. Where it happens and who is affected are on the Journeys page behind this drawer.

At risk	Sessions	Confidence
₱3,780 /wk	157	High

Draft ticket Watch sessions Owner Unassigned

Likely reason AI

A failing payment call, not confusion. Individual traders hit payment_timeout and then tap Pay again and again before they give up.

Ruled out by the AI

Not confusing wording: people tap Pay and hit errors rather than pausing.

Not a tracking fault: tracking on this screen was healthy all period.

Caveat: events alone can't say whether the app, the network or the payment provider is at fault.

Next steps AI

1. Investigate **payment_timeout** for individual traders
2. Fix **Pay button** response for individual traders
3. Monitor **Checkout and PIN** for individual traders · after the fix

The evidence Calculated

Error shown		Most repeated tap	
payment_timeout	26	Pay button	168

More breakdowns Calculated

Share of sessions that leave at Checkout and PIN. By user group is on the Journeys page; these are the extra cuts.

Product			
Send money		**23%**	518 sess.
Game voucher		14%	539 sess.
Electricity bills		12%	563 sess.
Cable TV and internet		8.6%	560 sess.
Post-paid telecom		7.8%	555 sess.
E-load		7.3%	1,976 sess.
Device			
Android, low-end		**12%**	1,579 sess.

iOS		9.7%	2,577 sess.
App version			
4.11.1		**12%**	1,085 sess.
4.11.2		10%	3,206 sess.
4.12		9.1%	943 sess.

Can we trust this?

- Tracking was healthy on this screen during the period. 73 of 95 exits carry an error or repeated taps, so these are real people failing.
- Ruled out: double-fired checkout events on Android (Sep 22–26, app 4.11.1). Fixed before this period.

Critical · Bug P2 · problem 2 of 3

Investigate OTP code for all users

Exits jumped from 5% to 68% on Oct 9, 02:00–10:00 UTC · worst for individual traders

Full diagnosis. Where it happens and who is affected are on the Journeys page behind this drawer.

At risk	Sessions	Confidence
₱2,940 /wk	134	Medium

Draft ticket Watch sessions Owner Engineering

Likely reason AI

Codes most likely never arrived. 89 of 91 people who left hit an error or a tap that did nothing, and Resend code was tapped 457 times.

Ruled out by the AI

Not confusing wording: people tap repeatedly instead of pausing.

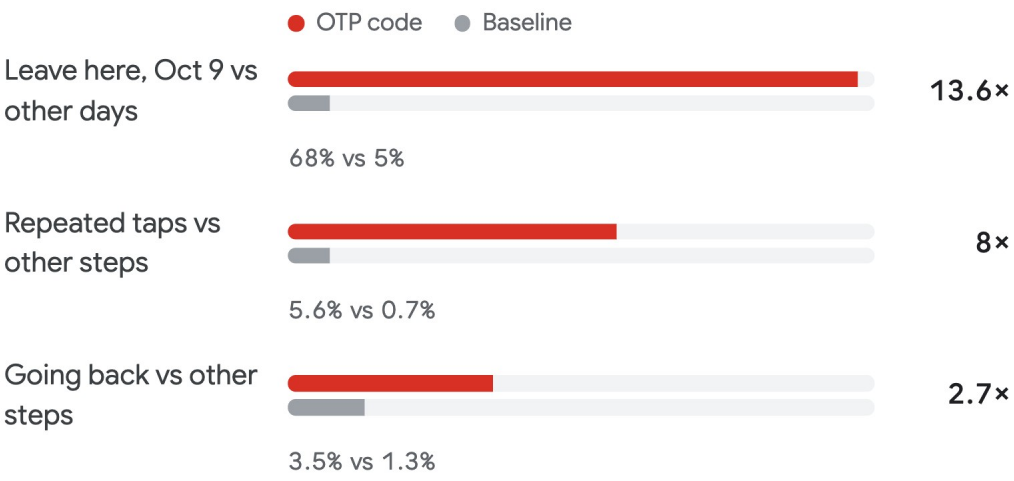

Not a tracking fault: OTP events were read normally on Oct 9.

Caveat: events can't tell whether the SMS provider, the network or the app failed to deliver the code.

Next steps AI

1. Investigate **SMS delivery** for Oct 9, 02:00–10:00 UTC · with the provider
2. Fix **Resend code** feedback for all users · show when a code is on its way
3. Monitor **OTP code** for all users · alert if exits pass 15%

The evidence Calculated

Most repeated tap		Loops back	
Resend code	457	to Phone number	62

More breakdowns Calculated Mock data

Share of sessions that leave at OTP code during the spike. By user group is on the Journeys page; these are the extra cuts.

Mobile network			
Network A		**74%**	61 sess.
Network B		66%	48 sess.
Network C		58%	25 sess.
Device			
Android, low-end		**71%**	52 sess.
Android, mid/high		69%	38 sess.
iOS		64%	44 sess.
App version			
4.12		**70%**	41 sess.
4.11.2		67%	71 sess.
4.11.1		66%	22 sess.

Can we trust this?

- OTP events were read normally on Oct 9. Exits carry real errors and repeated taps, so people really were stuck.
- Not related: Oct 11 is missing 3.2% of its rows, outside the spike window.

Raw evidence

Warning · Wording P3 · problem 3 of 3

Rewrite Personal data labels for all users

18.5% leave here every week · worst for individual traders (31.8%)

Full diagnosis. Where it happens and who is affected are on the Journeys page behind this drawer.

At risk	Sessions	Confidence
No ₱ estimate	2,509	High

Draft ticket Watch sessions Owner: Design

Likely reason AI

People are unsure what to enter. They pause for a long time and leave with few errors: 16.9% are stuck over 30 seconds, the highest of any step.

Ruled out by the AI

Not a bug: errors and taps that did nothing stay low (1.5%).

Not a natural exit: people pause on fields before leaving, rather than leaving straight away.

Caveat: which field causes the pause isn't tracked yet; per-field timing would confirm it.

Next steps AI

1. Rewrite **field labels and hints** for all users
2. Test **the new labels** with individual traders · the most affected group
3. Monitor **stuck time** at Personal data · after the change

The evidence Calculated

Worst user group		Dead taps, individual traders	
Individual traders	31.8%	vs 1.5% overall	9.1%

More breakdowns Calculated Mock data

Share of sessions that leave at Personal data. By user group is on the Journeys page; these are the extra cuts.

Device			
Android, low-end		**22%**	240 sess.
Android, mid/high		17%	180 sess.
iOS		15%	241 sess.
App version			
4.11.1		**20%**	150 sess.
4.11.2		18%	380 sess.
4.12		17%	131 sess.
Time of day			
Evening		**21%**	260 sess.
Afternoon		18%	230 sess.
Morning		15%	171 sess.

Can we trust this?

- Tracking on Personal data was healthy all period, and the pattern is steady week to week.
- Per-field timing isn't tracked yet, so the drawer can't point to one field.

Raw evidence

A sample of the events behind this finding, attached to the drafted ticket.

What do we tell the team this week? One page: the takeaway, three numbers, what to do.

Copy text | Download PDF | Share

Last 7 days Oct 8–14 | All users 1,000 | App | vs previous 7 days

Sample data · as of Oct 14, 2026

Squint weekly brief · All users · Oct 8–14, 2026

Fix **Send money checkout** for individual traders

The payment call is timing out. Sign-up completion also slipped 4.3 points, with an OTP spike on Oct 9.

Sign-up completion	Value at risk	Open problems
76.5%	₱18,154/wk	3
−4.3 pts	+₱2,940 · estimate	2 critical · 1 warning

What to do this week, and why

1. Fix **Send money checkout** for individual traders — Engineering · [OWNER]
   Payment call timing out. 61% of their sessions end at checkout, vs 9% for everyone else. About ₱3,780 a week.

2. Investigate **OTP code** for all users · Oct 9, 02:00–10:00 UTC — Engineering · [OWNER]
   Codes likely not arriving: exits rose from 5% to 68% and people kept tapping Resend code. About ₱2,940 a week.

3. Rewrite **Personal data labels** for all users · worst for individual traders — Design · [OWNER]
   Long pauses, few errors. 18% leave every week, up to 32% of individual traders.

What to leave alone

Keep **exit paths** pop-up free for all users

55% of exits are natural, with no sign of struggle.

Keep **Top-up flow** as is for large businesses

87% of their top-ups exceed ₱5,000, with low errors. Growth may target them with promos; the screens need no change.

Data notes

99.6% of events read. The KYC selfie tracker is silent on app 4.12; 59 sessions inside tracking faults were set aside. Money is estimated at ₱150 per sign-up, ₱100 per top-up and ₱200 per transaction. Sample dataset, synthetic.

Investigate OTP code for all users

Worst for individual traders

457

repeated taps on Resend code

89 / 91

people who left hit an error or a dead tap

7.5%

of individual traders tap repeatedly, vs 5.6%

Why · AI Codes likely aren't arriving. Fix delivery, then win back people who stalled.

Investigate OTP code for all users

P2 · ₱2,940 a week at risk (estimate)

Why · AI

The code most likely never arrives.

89 of 91 people who left hit an error or a tap that did nothing. 62 sessions looped back to Phone number.

Where people tap repeatedly · 643 taps

71% of repeated taps land on Resend code.

Investigate OTP code for individual traders

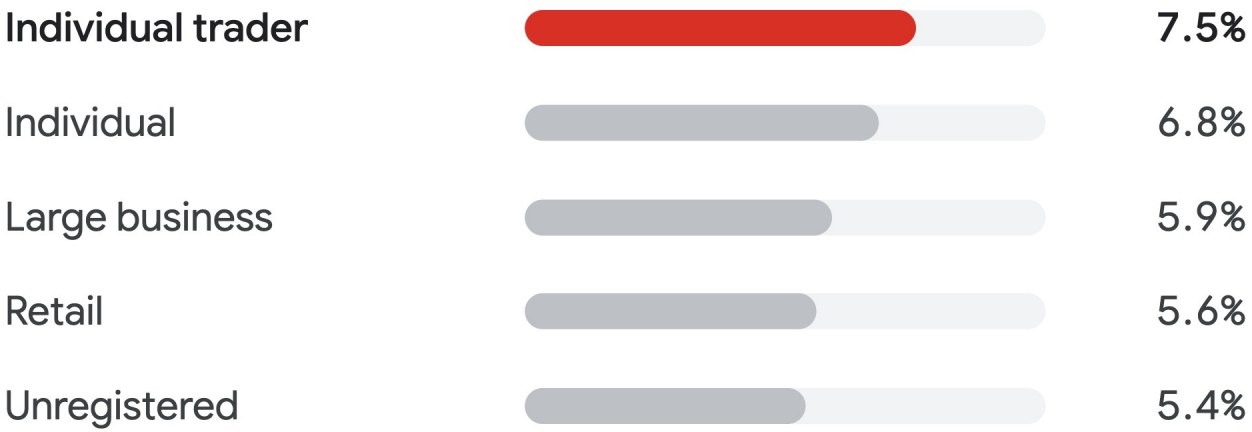

7.5% tap repeatedly, against 5.6% overall

Why · AI

Every group taps repeatedly, so the cause is shared.

Individual traders are hit hardest: the same group that leaves most at this step (15%).

Sessions with repeated taps at OTP code

Everyone: 5.6%.
