Squint

Brand Guidelines

Look closer.
Fix what matters.

Version 1.0
October 2026

Built from
Squint redesign · 27 screens

Covers
Brand, product UI, reports and slides

What's **inside**

Squint is an analytics product that tells a team why people leave their app and what to fix first. This guide turns the redesign into rules, so every screen, report and slide reads as the same product.

Values are sampled from the redesign. Where a value was adjusted for contrast, the page says so.

01	**Brand core** · what Squint is for

01 · Brand core

Squint shows a team **why people leave**, and what to fix first.

It reads every tap, error and exit in an app, ranks the problems by money at risk, and says in one sentence what to do. People squint to see something more clearly. That is the whole job.

Promise

One takeaway a week, ranked by money

Overview opens on the single problem worth fixing now, with its value at risk: "₱3,780 /wk at risk".

Who it serves

Product, design and engineering teams

People who own a journey and need to know where it breaks, for whom, and whether the data can be trusted.

Proof

Every claim shows its evidence

A number is always set against a baseline, and every line says whether it was calculated or written by AI.

Calculated AI Mock data

Product pyramid Overview · what needs attention → Explore · Journeys, Audiences → Ask · Weekly brief → Data sources

02 · Principles

Five things Squint **always does**

These come straight from the redesign. When a new screen, email or slide is unclear, check it against these first.

1

Money first

Problems are ranked by value at risk, so the top of every page is the thing worth fixing.

₱3,780 /wk at risk

2

One meaning per colour

Red is always a bug or the critical bar. Green only ever means healthy.

3

Show where a line came from

Numbers are labelled Calculated. Explanations are labelled AI. The labels can never be removed.

Calculated AI

4

Say what to do

Headlines are instructions, not observations. They start with a verb and name who is affected.

Fix **Send money checkout** for individual traders

5

Earn trust before insight

Data health is checked before any analysis runs, so a broken tracker is never mistaken for people.

● Data reliable · 1 note

03 · Voice and tone

A sharp analyst who **talks like a teammate**

Squint has read the data so the reader doesn't have to. It speaks in plain words, gives the number, says what it is sure of and what it isn't, then says what to do.

Plain

Everyday words for what people did.

WE SAY
The payment call is timing out.

WE AVOID
Elevated latency anomalies detected in the transaction pipeline.

Specific

A number, a group and a comparison.

WE SAY
61% of their sessions end at checkout, vs 9% for everyone else.

WE AVOID
Checkout conversion is significantly lower for some users.

Honest

Say what was ruled out and what can't be known.

WE SAY
Events alone can't say whether the app, the network or the provider is at fault.

WE AVOID
The root cause is the payment provider.

Action-first

Lead with the fix; the finding follows.

WE SAY
Rewrite Personal data labels for all users

WE AVOID
Personal data step shows high dwell time

04 · Writing mechanics

Headline **grammar**

Action Item Who Context

Investigate **OTP code** for all users · worst for individual traders

Only the item is bold. The verb is regular weight, the context is grey and set smaller.

Screen verbs · used in Journeys

Fix · Investigate · Rewrite · Simplify · Keep

People verbs · used in Audiences

Target · Win back · Protect · Keep

Case	Sentence case everywhere: titles, buttons, chips. "Weekly brief", not "Weekly Brief".
Comparisons	Every rate gets a baseline: "61% vs 9% for everyone else", "6.8×".
Money	Currency symbol, thousands separator, period: **₱18,154/wk**. Mark estimates as estimates.
Change	Signed and coloured by meaning: −4.3 pts, + ₱2,940 when more is at risk.
Dates and time	"Oct 8–14", "as of Oct 14, 2026". Times in UTC: "02:00–10:00 UTC".
Separators	A middle dot joins related facts: "All users · Last 7 days".
Names	Event names in mono: `payment_timeout`. Screens and buttons as the user sees them: Pay, Resend code.
Terms	**User group** is who someone is (a filter). **Audience** is people Squint groups by behaviour.

05 · The logo

The lens

A magnifying glass made from four signal colours, with one blue point of focus in the middle. It says what Squint does: look at everything, then focus on one thing.

Ring	Four arcs in the signal colours, the gaps on the diagonals.
Focus dot	Always blue. It is the one thing worth fixing.
Handle	Grey 900 on light, Grey 200 on dark.
Wordmark	"Squint" in Google Sans Bold, tight tracking.

Primary · on white #FFFFFF

On Grey 50 app canvas #F8F9FA

Reversed · on Grey 900 #202124

One colour · white on Blue 600 #1A73E8

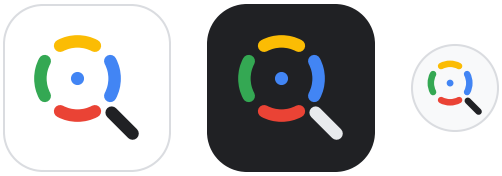

06 · Logo rules

Clear space

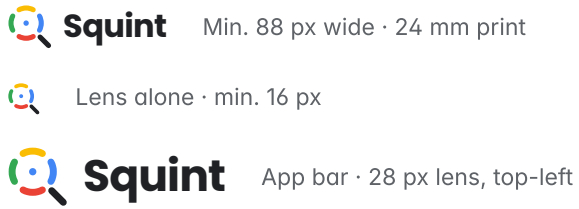

Keep clear space equal to **x**, half the lens height, on every side.

Lens on its own

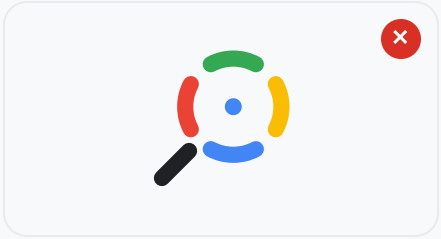

App icon, favicon and report header. Use it where the full logo would fall below minimum size.

Size and placement

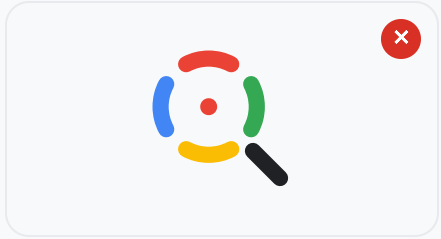

Top-left in the app bar and on documents. On slides, the lens sits before the slide label.

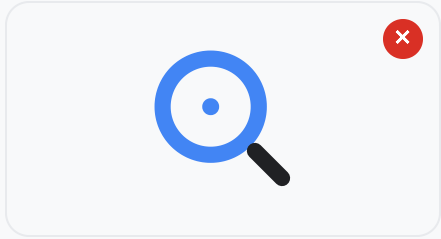

Please don't

Rotate the lens or move the handle.

Reorder the colours or recolour the dot.

Close the gaps into one ring.

Retype the wordmark in another font.

Place it on a signal colour other than blue.

07 · Colour

Four signals, one meaning each

The palette is Google's, used strictly. Each colour stands for one thing across every page, chart and chip, so people learn it once.

Blue 600 Aa

Action Blue

#1A73E8 · RGB 26 115 232

Buttons, links, selection, the focus dot. Also the "Confusing wording" cause.

Red 600 Aa

Critical Red

#D93025 · RGB 217 48 37

Critical problems, technical bugs, the one bar that matters, money lost.

Yellow 600 Aa

Warning Yellow

#F9AB00 · RGB 249 171 0

Warnings, UX friction, frustrated loops and mock data. Never used for text.

Green 600 Aa

Healthy Green

#1E8E3E · RGB 30 142 62

Healthy only: data reliable, completed steps, good friction. Never decoration.

Tonal pairs · chip and panel fills with their text colour

Blue 50 / 700	Red 50 / 700	Yellow 50 / ink	Green 50 / 700
#E8F0FE · #1967D2	#FCE8E6 · #C5221F	#FEF7E0 · #944F01	#E6F4EA · #137333

Lens tones · logo only

#FBBC04	#4285F4	#EA4335	#34A853

Brighter tones keep the lens lively at small sizes. Use the 600 tones everywhere else.

08 · Colour

Neutrals do most of the work

Grey carries the baseline, "everyone else" and natural exits, so the one coloured bar stands out.

Grey 900
#202124
Text, P-chips

Grey 700
#5F6368
Secondary text

Grey 500
#9AA0A6
Comparison bars

Grey 300
#DADCE0
Borders, natural

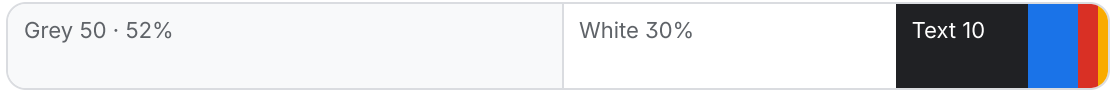

Grey 200
#E8EAED
Bar tracks, dividers

Grey 100
#F1F3F4
Calculated chip

Grey 50
#F8F9FA
App canvas, panels

White
#FFFFFF
Cards, top bar

Proportion on a typical screen

Signal colours together stay under 10% of any view. If a page looks colourful, something is mislabelled.

The meaning map

The same cause gets the same colour in chips, bars, flows and timelines.

Colour	Severity	Cause	In charts
Red	Critical	Technical bug	The focus bar, left the app, repeated taps
Yellow	Watch	UX friction	Errors, frustrated loops
Blue	Warning	Confusing wording	Selection, went back, heat scale
Green	Keep	—	Completed, healthy, good friction
Grey	—	Natural exit	Everyone else, idle, baseline

Accessible text pairs

White on Blue 600
4.5 : 1 · AA

Grey 700 on white
6.0 : 1 · AA

Grey 900 on 50
15.3 : 1 · AAA

Red 700 on 50
4.9 : 1 · AA

Yellow ink on 50
5.8 : 1 · AA

Green 700 on 50
5.2 : 1 · AA

Yellow ink is darkened from the redesign's #B06000 (4.3 : 1) to pass AA. Use Green 700, not 600, for green text.

09 · Typography

One family, **quiet weights**

Google Sans throughout, mostly Regular. Weight is saved for the item in a headline and for labels, so bold always means "this one".

Aa

ABCDEFGHIJKLM
NOPQRSTUVWXYZ
abcdefghijklmnopqrstuvwxyz
0123456789 ₱ % × → ·

Google Sans

UI, headlines, numbers. Regular 400, Medium 500, Bold 700 for the wordmark only.

Google Sans Mono

Event names, error codes, hex values. `payment_timeout`

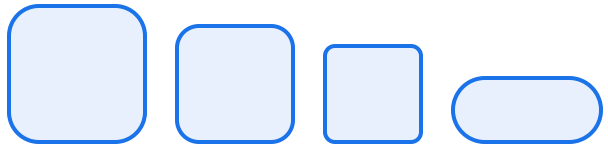

Fallback stack: Google Sans → Roboto → Arial. This PDF is set in Inter as a stand-in; build files should use Google Sans.

Slide title 48/56 · 400	Investigate **OTP code**
Big number 36/44 · 400 · tabular	₱18,154/wk +₱2,940
Page title 28/36 · 400	Overview
Takeaway 24/32 · 400 / 500	Fix **Send money checkout** for individual traders
Section, card title 18/24 · 500	Other problems
Body, table 14/20 · 400	payment_timeout errors, then 168 repeated taps on Pay.
Label, caption 12/16 · 500	Sample data · as of Oct 14, 2026

10 · Shape, space and icons

Soft cards, **round pills**, flat surfaces

Corner radius

16 · cards 12 · panels 6 · tags pill · buttons

Buttons, chips, filters and the Ask bar are pills. Source tags (Calculated, AI) are small rectangles so they never read as buttons.

Spacing · 4 px base

4 · 8 · 12 · 16 · 24 · 32 · 48 · 64

Cards pad 24–32. Cards sit 24 apart. Rows inside a table are 64 tall so each problem gets room.

Elevation

Border

Overlay

Everything on the page is flat with a 1 px Grey 300 border. Shadows are only for things that float: menus, drawers, the Ask dropdown and dialogs.

Icons

Material Symbols Outlined, 20 px, 1.5 px stroke, Grey 700. Blue only when selected or on a button.

Overview · Journeys · Audiences · Ask · Weekly brief · Data sources · Date · Checked · Ruled out

11 · Components

Buttons, chips and **trust signals**

Buttons · one primary per card

See why | Draft ticket | Watch sessions | Snooze | ⋮

Filled	Go deeper. One per card.
Tonal	Act on it: draft a ticket, add evidence.
Outlined	Secondary paths.
Text / icon	Low stakes, overflow: snooze, mark fixed.

Status and classification

Severity · cause	Critical · Bug · Warning · Wording · Watch · UX · Keep
Priority	P1 P2 P3 P2 · P3
Where a line came from	Calculated · AI · Mock data
Risk type	Segment risk · Blind spot · Data gap
Confidence	High · Medium · Low

Data trust pill

Lives in the top bar and the Overview trust line. Both always say the same thing.

- Data reliable · 1 note
- Data: 1 fault affects findings
- Data: pipeline down, findings paused

Yellow only when a fault touches an open problem.

12 · Data visualisation

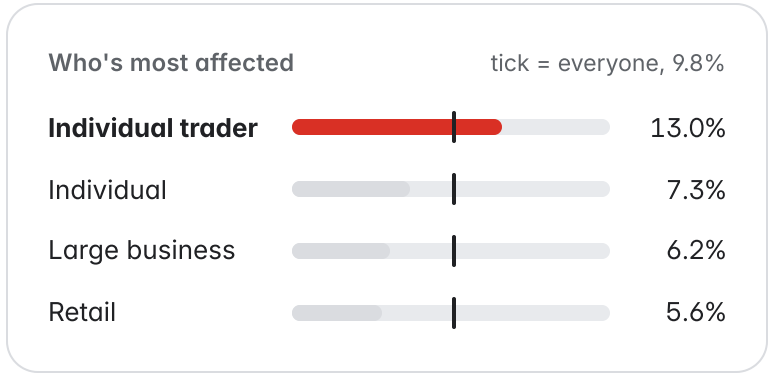

Red for the **one thing**, grey for the rest

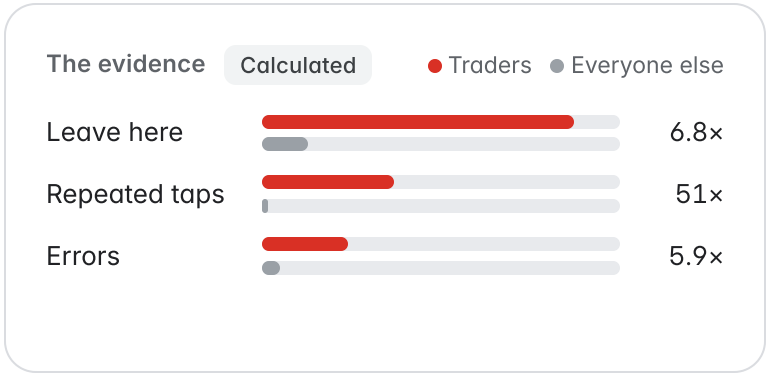

Highlight one bar. The group or step in question is red; every other bar is Grey 300–500.

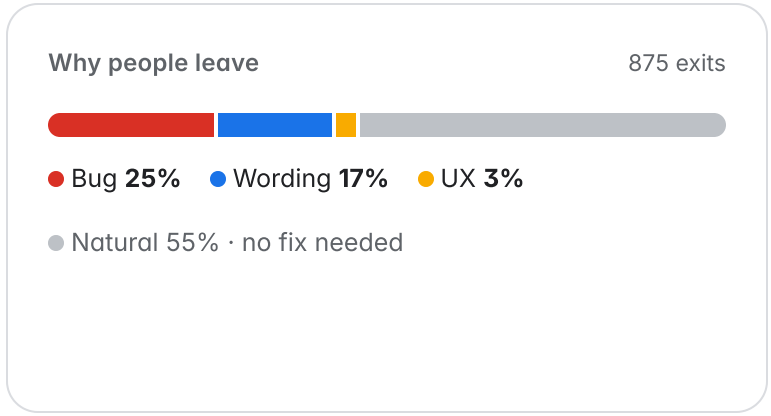

Always a baseline. A dark tick marks "everyone"; a grey twin bar shows "everyone else".

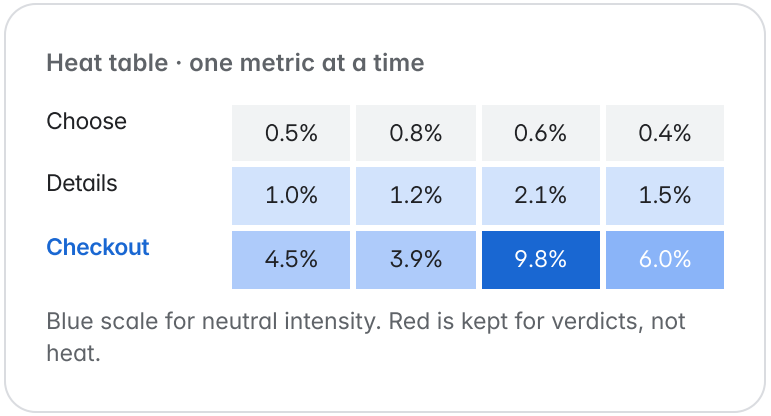

Say the ratio. End the row with the multiple: 6.8×.

Bars, not pies. 8 px rounded bars on a Grey 200 track. Stacked bars for share of causes.

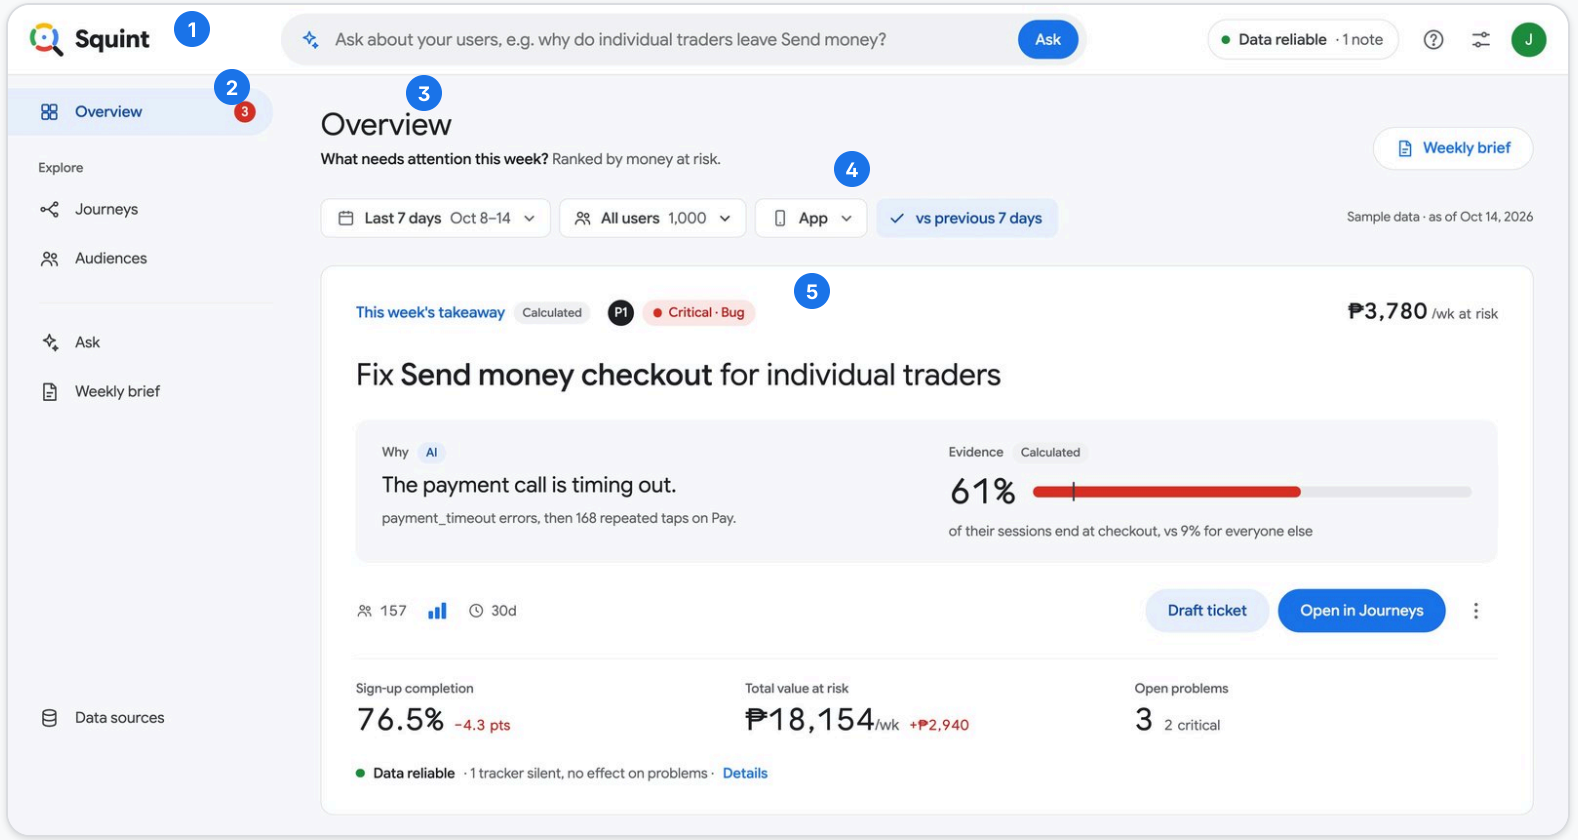

13 · Layout

The app **shell**

Every page answers one question, set as its subtitle. The scope bar sits under the title so the reader always knows what the numbers cover.

1. **Top app bar** · 68 px. Logo, Ask, data trust pill, help, settings, account.
2. **Navigation** · 256 px, grouped by pyramid level. Data sources pinned low.
3. **Title + question** · "What needs attention this week?"
4. **Scope bar** · date, user group, platform, comparison. Data note on the right.
5. **Hero card** · the takeaway, then lists and supporting cards below.

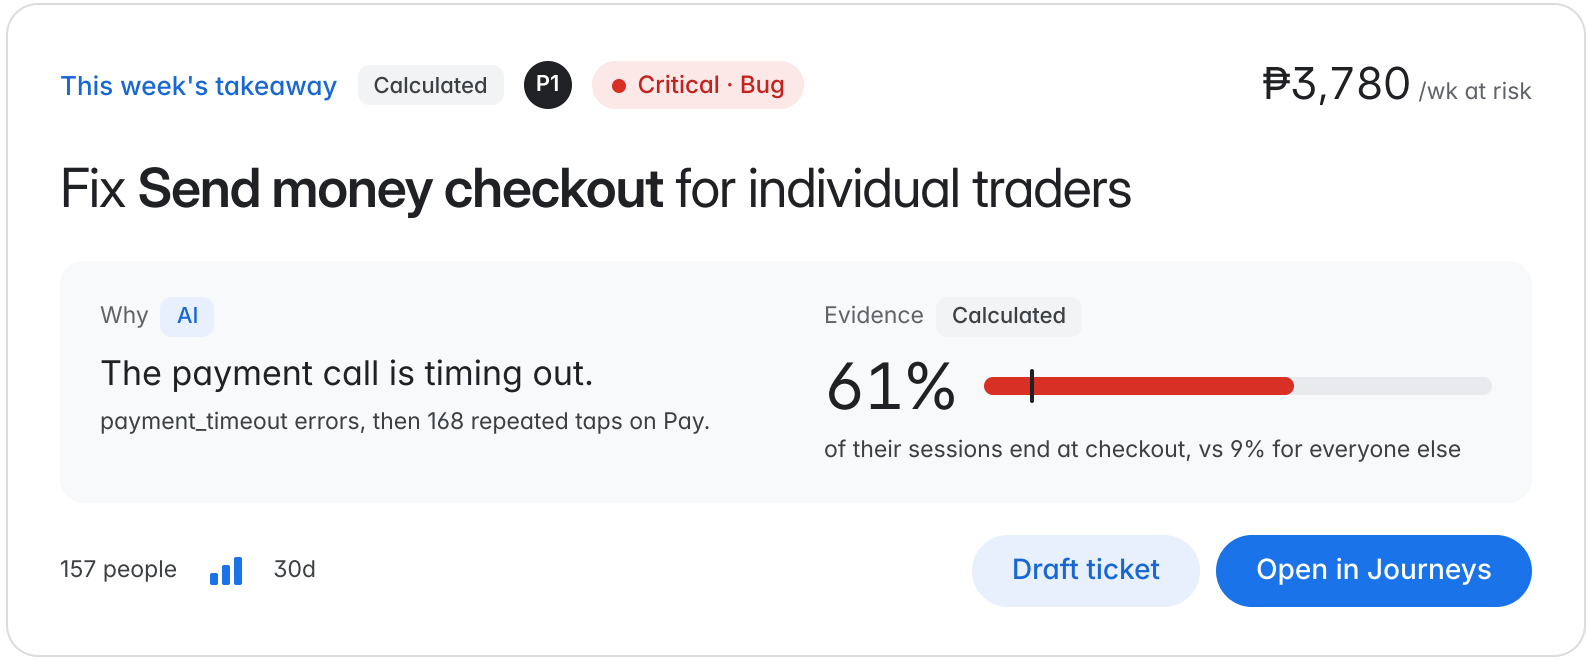

Overview, from the redesign. Content column max 1,170 px, 24 px gutters.

14 · Signature pattern

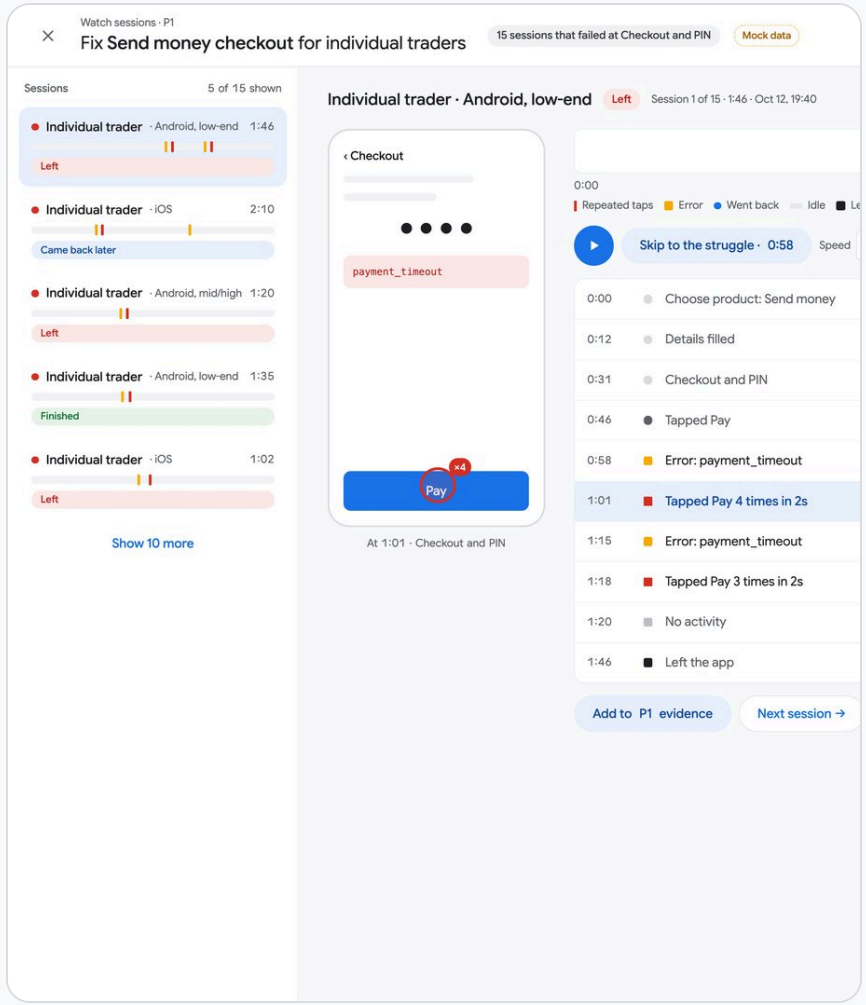

The **takeaway card**

Squint's signature. Reuse its order anywhere a finding is shown: drawer, Ask answer, weekly brief, slide.

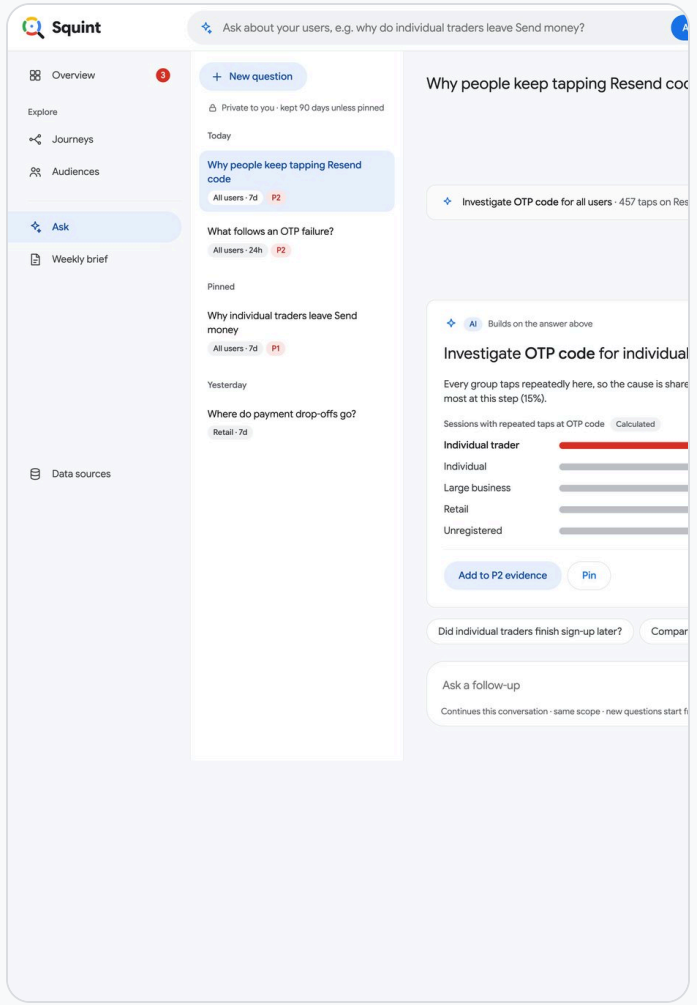

1. **Label row.** Section, source, priority, severity. Money top-right.
2. **Headline.** Action grammar, item in bold.
3. **Why + evidence.** AI reason on the left, the calculated number on the right, in one Grey 50 panel.
4. **Meta + actions.** People, confidence, window. Tonal act, filled go deeper.
5. **Trust line.** Ends the card when the data has a note: "Data reliable · 1 tracker silent".

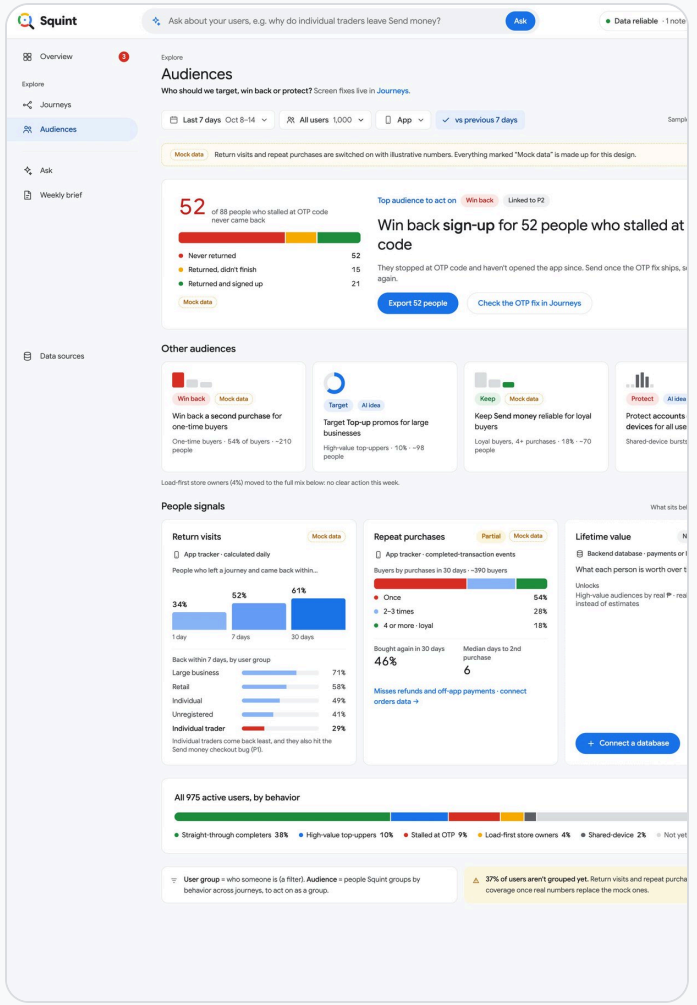

15 · Brand in use · product

Watch sessions · timeline uses the cause colours

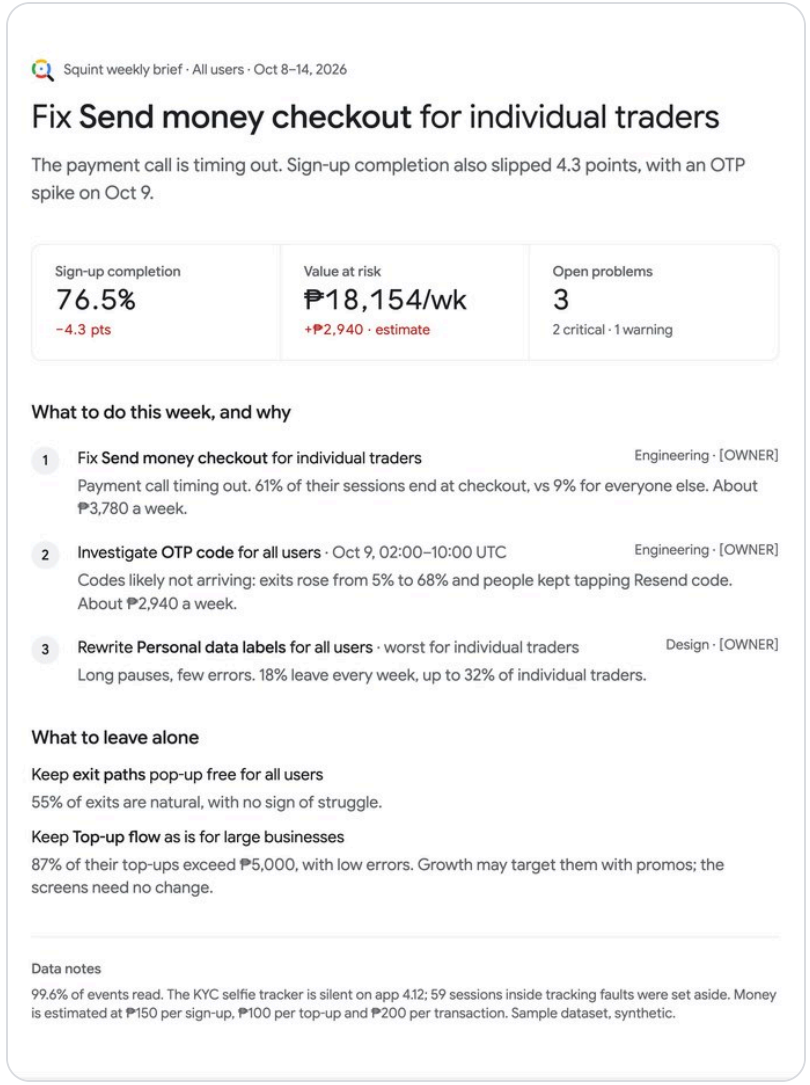

Ask · answers reuse the takeaway grammar

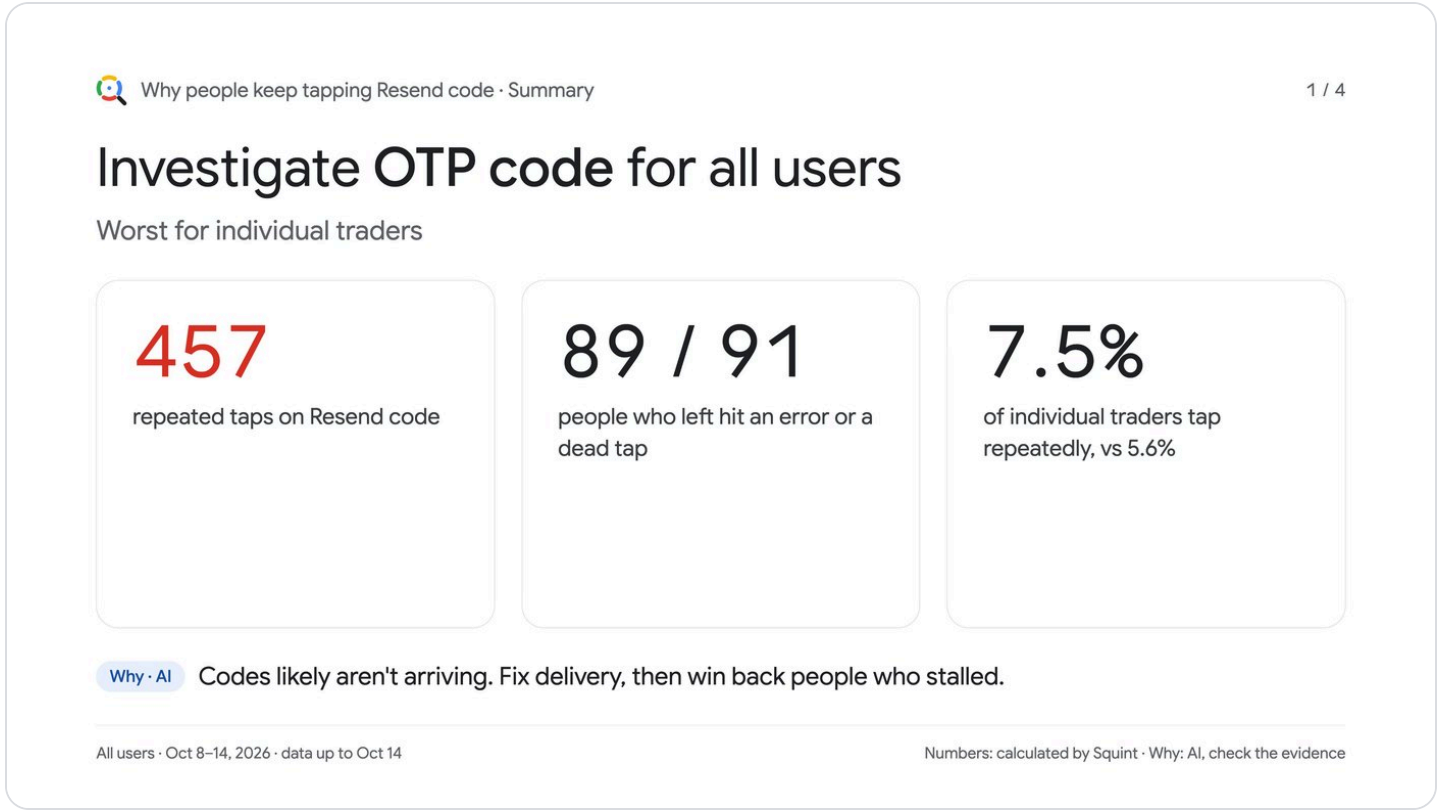

Audiences · people verbs, mock data flagged

Screens from the Squint redesign. Notice what repeats: the action headline, the red focus bar against grey, Calculated and AI tags, and one filled button per card.

16 · Brand in use · reports and slides

Weekly brief · one page: takeaway, three numbers, what to do

Exported slide · 16:9, white, lens before the slide label

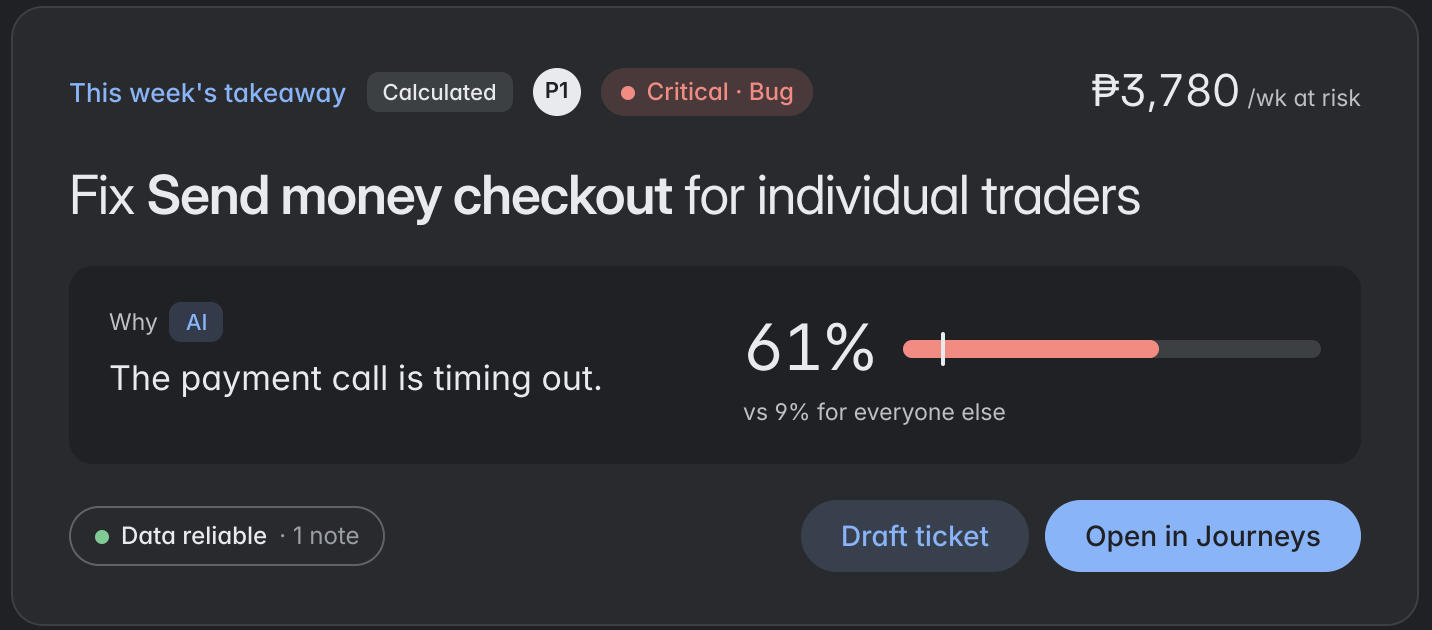

Header	Lens + "question · slide type" in Grey 700, page count top-right.	**Title**	Action grammar at 48 px, subtitle in Grey 700 below.
Numbers	Three stat cards at most. Only the critical number is red.	**Footer**	Scope and date left; "Numbers: calculated by Squint · Why: AI, check the evidence" right. Never removed.

17 · Dark theme

Same meanings, lighter tones

Preferences offer Light, Dark and System. Dark keeps every rule; signals step up to their 300 tones so they hold contrast on Grey 900.

Role	Light	Dark
Canvas	#F8F9FA	#202124
Card	#FFFFFF	#292A2D
Text	#202124	#E8EAED
Action	#1A73E8	#8AB4F8 · 7.6:1
Critical	#D93025	#F28B82 · 6.7:1
Warning	#F9AB00	#FDD663
Healthy	#1E8E3E	#81C995

18 · Quick reference

Tokens

Paste these into the codebase, Figma variables or a slide template so everyone works from the same values.
